

CTX OPPOSED ENTRY GRENADE

Description

The CTX-1-C Single Bang Grenade is a powerful CTX Opposed Entry Grenade designed for use where traditional units simply may not be sufficient for the situation. The device is deployed during Law Enforcement and Special Forces operations where an immediate and extreme level of compliance is required from a target.

Extreme noise, blast pressure and light output levels induce a debilitating effect on any person within the effective range, however the devices present no fragmentation or projectile concerns.

In order to minimise obscuration on function the unit offers a significantly reduced smoke signature and also has limited movement on function.

Operation

The CTX-1-C incorporates a unique three-stage safety ring pull mechanism. The device is held in the normal manner and pressure is applied upwards to release the ring pull system. Once released the pin is then twisted and is withdrawn in the normal manner. As soon as the grenade leaves the hand, the fly-off-lever is released, allowing the hammer arm to function. The hammer in turn initiates the primer, functioning the grenade via the internal delay fuse element, utilising Top and Base venting (TBV) for safer user handling.

Application:

- Opposed Entry/CT Operations
- Dynamic/Tactical Entry
- Various Hijack/Hostage Recovery Situations
